बाघ
 बाघ विश्व की पहिली बडी बिल्ली का रूपमे जाना जाता है। एक बडी जातमे से बाघ का वजन 300 किग्रा और लंबाई 10 फुट हो सकती है। भारतीय उपमहादीप में बाघ का एक ही देश है, यहाँ बाघों के कई जीव विज्ञान प्रकार हैं: बंग, मंग, मीठ और बर्मी के बाघ जीव को बाघों को भी मानने की शक्ति रखता है।
 अन्य बिल्ली प्रजाति के बाघ जातमे जानवुओं के बिल्ली का ही नाम है बाघ। बाघों का वजन 100 किग्रा तक हो सकता है। बाघों को बाघों के वजन के अनुसार बाघों के नाम बाघों को बाघों बाघ बाघ बाघ है।

Royal Bengal Tiger (Panthera tigris tigris)
 The tiger is the largest wild feline. A large male can weigh 320 kg and can reach 10 feet in length. In the Indian subcontinent, the tiger inhabits tall grasslands and riverine forests as well as the swamp forests of the Sundarbans. The main prey of the tiger is sambar, chital, bantengs, wild boar, monkeys, peacocks and porcupine. Tigers are also capable of bringing down larger prey like adult gaur, rhino and elephant calves. Unlike other large cats, the tiger is fond of spending time in water, which helps it to keep its body cool in the hot summer days. Habitat destruction, habitat fragmentation and poaching have greatly reduced tiger populations.

What can “KI-Sign Standard (Offline)” do for me?

“Ki-Sign Standard (Offline)” is a Made-In-India & Made-For-World All-in-one Offline (USB pen drive based) Software Digital Notice Board/Digital Signage solution that enables organizations to communicate better.

Corporate Communications
 Share HR updates, company bulletins and notifications on your digital signage TV

Digital Menu Boards
 Display your menu with descriptions, prices and images.

Hotels
 Create event signage boards, infotainment displays, menu boards and upsell amenities

Healthcare
 Broadcast clinic services, doctor bio's, and practice information

What are the features of “KI-Sign Standard (Offline)”?

USB Data Auto Download
 Automatically download all content from USB drive to our controller; no need to keep USB drive connected.

Auto Start on Power On
 Automatically boot to app on switching the power on; manual starting is not required

Ticker Management
 Manage and edit your ticker text, font, scrolling speed, color and background color

Multi Region Layouts
 User can divide screens into multiple regions and assign different playlist.

Detailed Feature List for “KI-Sign Standard”

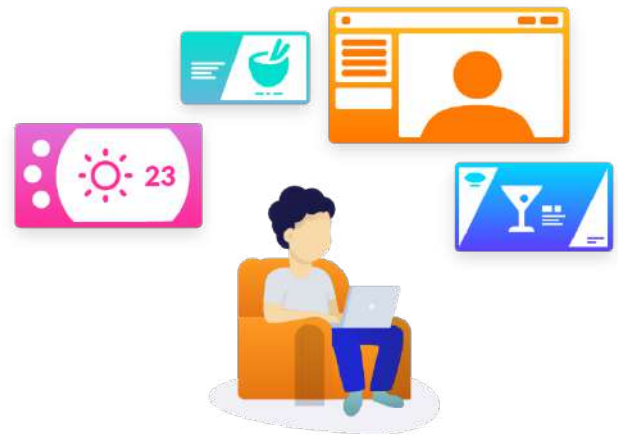

One of the most Easy-to-Use Digital Signage Software in the World!

“Kiosk India Ki-Sign Standard (Offline)” is a Made-In-India & Made-For-The-World all-in-one Offline (USB pen drive based) software Digital Notice Board/Digital Signage solution that enables organizations to communicate better. Its feature rich yet simple to use, plug & play, scalable, support-free & an affordable solution.

Features	Description
Offline USB Playback	Contents get synced automatically from a USB drive when it’s connected to the device. The device app auto detects pen drive, syncs the content and plays automatically without any human intervention. After sync is complete, user is notified and he can remove the USB storage as all contents are stored locally.
Orientation Management	User can select the right orientation as per the orientation of the screen i.e. Landscape, Reverse Landscape, Portrait & Reverse Portrait. Screens need not necessarily have orientation support hence the solution is suitable for any kind of display.
Ticker Management	User can define text scrolling texts. Multiple scrollers can be set to run in a loop. Each scroller can be given a specific color, background color, font size.
Screen Split	User can divide screens into multiple regions and assign contents to each of the regions for playback. User can easily change the layout of a channel using remote.
Content Selection	Users can select/de-select contents for playback using remote.
One click switch to Single/MultiRegion	User can switch to single region or multi region using a toggle switch. This helps keep UI simple when multiregion is not in use.
Time Management	User can specify default duration for all images (time for which images should stay on the screen-applies to all images).
Auto Scaling	All media items are scaled to the size of region for better aesthetics.
Boot to App	App auto starts after boot hence need not to be run manually.
Auto Start on receiving Power	Device has been customized to run automatically when it receives power without requiring someone to switch it on.
Plug & Play Solution	Device deployment is a plug & play setup hence making it easier to deploy.
Content (Assets) Types Supported	
Videos	mp4
Images	JPEG,PNG
Custom Integration (chargeable extra)	With a rock solid platform that we own from scratch and thanks to our highly capable software team, We have the expertise to do all sort of custom integrations to help organizations make their displays more meaningful to them.

What can “KI-Sign Pro” do for me?

“Ki-Sign Pro” is a Made-In-India & Made-For-World All-in-one Cloud based Software Digital Notice Board/Digital Signage solution that enables organizations to communicate better.

Corporate Communications
 Share HR updates, company bulletins and notifications on your digital signage TV

Digital Menu Boards
 Display your menu with descriptions, prices and images.

Hotels
 Create event signage boards, infotainment displays, menu boards and upsell amenities

Healthcare
 Broadcast clinic services, doctor bio's, and practice information

What are the features of “KI-Sign Pro”?

Widgets
 Media: Videos, slideshows, images, ticker
 Social Media: Google Slides, PDF, Cricket Score
 Real-time: RSS, weather, websites, YouTube

Playlist Scheduling
 Set play duration of slides and templates. Preschedule for repeat or one-time play

Status & Reports
 View the status of your digital signage screens and uptime
 Run detailed proof-of-play

Multi Region Layouts
 User can divide screens into multiple regions and assign different playlist.

Detailed Feature List for “KI-Sign Pro”

One of the most Easy-to-Use Digital Signage Software in the World!

“Kiosk India Ki-Sign Pro” is a Made-In-India & Made-For-The-World all-in-one Cloud based software Digital Notice Board/Digital Signage solution that enables organizations to communicate better. Its feature rich yet simple to use, plug & play, scalable, support-free & an affordable solution.

Features	Description
Centralized Management	User can manage content on all displays seamlessly from anywhere.
Responsive Mobile Friendly UI	User Interface is responsive which means it can be managed from any device- even from a mobile phone seamlessly . Having complete control on mobile phone ensures better management.
Group Management	User can group displays which are to display the same content. This makes it easy for the user to apply same content on a group of screens in one go. Users can create new groups, change the group of device easily.
Playlist Management	User can create set of contents that need to be played in a sequence. Users can easily add,edit,delete items from existing playlists. User can duplicate a playlist for quick modification. User can create unlimited playlists .These playlists can be consumed in device groups.
Sequence Management	Users can easily change the sequence in which items would play on the screen. Sequence can easily be changed in easy to use drag drop interface.
Screen Split (Channel/Layout Management)	User can divide screens into multiple regions and assign playlist to each of the regions for playback. User can easily change the layout of a channel in an easy to use drag drop interface.
MultiChannel Stitching	User can even define multiple channels to run in a loop. This can help to run multiple channels (with different layouts / split ratio) to run one after the other. Ex: In a single region setup, this feature helps a Notice Board serve as an album showcase to pair a specific ticker series with a playlist.
One click switch to Single/MultiRegion	User can switch to single region or multi region using a toggle switch. This helps keep UI simple when multiregion is not in use.
Ticker Management	User can define text scrolling texts.Multiple scrollers can be set to run in a loop. Each scroller can be given a specific color,background color,speed,outline color font size.
RSS Feed Integration with Tickers (Requires Internet)	RSS feed can be integrated in tickers which can allow automated content from a give source (Ex- a news feed from government) to run as scrollers.
Time Management	User can specify default or specific duration for media items (time for which a media should stay on the screen).
Expiry Management	User can define expiry date of a media (within the playlist). A media would stop appearing on the display post its expiry date. By default, media items have no expiry date.
Start Time Management	
Schedule Management	User can define specific schedules in advance. Users can define day wise schedules. User can define playlists for specific timeslots on a day. Users can also define playlists for a special occasions well in advance.
Orientation Management	User can create layouts suited for all orientations i.e. Landscape, Reverse Landscape, Portrait & Reverse Portrait.

Features	Description
Content Filtering	Users can easily filter content based on media types. Filter by media type,modification time,aspect ratio can be applied to quickly filter content. Easy content filtering and search becomes important as media repository can grow quickly over a period of time.
Content Search	User can easily search media(s) by filename.
Content Tagging	User can assign tags to media items for each search by tags. This is useful to quickly find content by tags (like annual function) and add them to a playlist.
Device Management	User can see ping time of all devices. Devices which are not active for more than 2 hours are shown in Red.
Device Screenshot	Device screenshot(s) can be requested by the user to check live content on a display.
Remote Reboot	User can reboot any device remotely from their dashboard.
Simplistic UI	A very simple to use yet feature rich UI ensures that there is least learning curve and management is hassle free so that you can have right content at the right time on the right screen for the right audience.
Files Download Report	Device client app updates the backend when the download of a new media item is complete. The report is available to the user on his dashboard.
Playback Reports	Reports are available on the user dashboard with complete device playback reports.
Local Playback	Client software downloads all the content that it is assigned to play, for local playback to ensure that media plays gracefully even in case when network is down.Local playback would also ensure that content (even a large video) plays without any lag on the screen.
Background Download Process	When a change made by the user triggers a download, it happens in the background not affecting the current playback.Only after the download is complete, playback restarts incorporating the new change. This at times becomes crucial when the network coverage is low when a download is in progress. There is never a <i>NoShow</i> case on the screen.
Data Caching	Frequently played contents are stored in local cache on the device even if they are deleted from the current playlist. This helps to prevent content re-download when they are loaded in the playlist again next time.
Smart AutoCleaning of Device Storage	Client Software auto cleans old or unused content when the device storage is close to being exhausted.
Auto Scaling	All media items are scaled to the size of region for better aesthetics.
Device Synchronization	All devices can be made to synchronize with each other.This is useful for advertisement domain/DOOH.
Boot to App	App auto starts after boot hence need not to be run manually.
Offline USB Playback	Admin can also switch the device to run in a completely offline mode. In this case , the device can sync content automatically from a USB storage connected to the screen. This is particularly useful when user has a large file to quickly play on the screen. This is an optional / available on request feature.
Auto Start on receiving Power	Device has been customized to run automatically when it receives power without requiring someone to switch it on.
Security	Only authorized users can access and push content on displays.
Plug & Play Solution	Device deployment is a plug & play setup hence making it easier to deploy.We take normally 2 minutes to setup provided internet connectivity is there.
Scalable Solution	The entire solution has been developed using latest technologies and is very scalable.

Content (Assets) Types Supported	
Videos	mp4,webm
Images	JPEG,PNG
Office Files	Word, Powerpoint, Excel files (multipages supported)
Document	PDF (multipages supported)
Scrolling Excel Template	Supported with CSV files.Tabulated lists can be displayed with bigger fonts and a scrolling view. This is very useful to achieve a paperless notice board system.
URL	URL (Local or Web)
Custom HTML templates	Custom templates are supported to support content creation for specific usecases - like birthday greetings, congratulation messages, full screen messages, event notifications, etc.
Google Calendar Integration(Requires internet)	Templates can be integrated with google calendar to automate notifications.
Google Sheet Integration(Requires internet)	Google Sheet integration allows you to display real time data from a shared sheet.
Custom Integration (chargeable extra)	With a rock solid platform that we own from scratch and thanks to our highly capable software team,We have the expertise to do all sort of custom integrations to help organizations make their displays more meaningful to them.
